

NETWAYS GmbH has been supporting companies to manage complex IT infrastructures since 1995.

The offered solutions and high-end services based on Linux and open source tools ensure the smooth operation of networks, servers and applications. The expertise covers availability and performance monitoring with Icinga, service and configuration management, cluster and load balancing systems for open source data center alongside hosting and managed services.

Above and beyond, NETWAYS also organizes conferences and training courses on open source monitoring and data center solutions.
